Session 5: Module 4 - Blood Work	
SCRIPT	
Description	**Text**
1. Introduction	Welcome to Session 5 Module 4 of the MSPIRIT required online training session presented by the Montana Department of Public Health and Human Services WIC program.
2. Start	No text
3. Bld	In this module, we are going to take a look at Bloodwork within the height/weight and blood tab.
	Click on the link to open it.
4. Bld	We have already entered Rose's height and weight data. Go ahead and open the blood tab on the right side of the page.
5. Bld	No text
6. Bld	With the exception of infants less than 9 months old, M-SPIRIT requires a blood work contact to complete **every** certification.
	"Bloodwork contact" means that either a value or exception reason must be entered in the blood tab in order for it to be considered complete.
7. Bld	Today is Rose's certification appointment, she is 3 years old.
	The last blood value taken for Rose was at her last certification, about a year ago, and since it was normal, they were able to "skip" her bloodwork at the mid-certification appointment in November.
	We have collected Rose's hemoglobin today and are ready to enter the data. Click add.
8. Bld	Notice there are several fields where data can be entered and the measurement date defaults to the current date.
	If you are entering in referral data from the participant's healthcare provider, you could change the date here. You would need to also scan in the referral information, which must be dated and signed by the healthcare provider. This would be done in the participant folder, not in the CGS.
	On the bottom of this box is the "Reason Blood Work Was Not Collected" drop down menu. This is where you may enter an "exception" reason.
	See chapter 5 of the state plan for information on when a bloodwork exception may be made or bloodwork collection may be skipped.
	In Montana, we only collect and enter hemoglobin or hematocrit values. So go ahead and enter 11 for Rose's hemoglobin today.

Description	**Text**
9. Bld	And click OK
10. Bld	You can see the value you entered here.
	And notice that the system calculated Rose's age in years, months and days. For pregnant women it would calculate the weeks gestation. Close this window.
11. Bld	The system will auto-assign risk factor 201- low hemoglobin/hematocrit based on WIC category, smoking amount and elevation. See the "Anemia Cut-off Values" attachment in the State Plan for more information on what the ranges are.
12. Bld	MSPIRIT will only accept values of 6 or greater. If a value is less than 6, enter "6" in the system and then document in your notes the actual value.
	Remember to refer the participant to the HCP and RD if hemoglobin is of concern. See the High Risk Table.
	Keep in mind, however, that a value below 6 is so low that you may want to consider a re-test, as there may have been an error in collection or reading.
13. Bld	Do you have any questions about what we just reviewed? If so, please submit them via the M-SPIRIT Questions forum on the Montana WIC website.
14. Bld	No Text
